

Inspection documents

Where materials, fabricated parts and assemblies are manufactured, the manufacturer produces documents including declarations and test reports to confirm the nature of the manufacturing, inspection and testing processes applied.

Types of inspection document

2.1. Declaration of order compliance

Inspection documents drawn up on the basis of inspections and tests conducted by production personnel authorised by the manufacturer.

2.2 Test report

Inspection documents drawn up on the basis of inspections and tests carried out or supervised by authorised independent personnel and based on non-specific testing. The results are reported to the customer.

3.1 Inspection document 3.1

These documents are marked as '3.1' and are drawn up on the basis of inspections and tests carried out or supervised by the manufacturer's authorised representative independent of the manufacturing and based on specific testing. The former certificate with designation 3.1 B is replaced by the new 3.1 certificate.

3.2 Inspection document 3.2

This certificate is drawn up on the basis of inspections and tests carried out by the manufacturer's authorised representative independent of the manufacturing department and either the purchaser's authorised representative or the inspector designated by the official regulations. The former certificates 3.1 A, 3.1 C and 3.2 are replaced by the new 3.2 certificate.

Inspection documents are validated by the person(s) responsible by signing or marking in an appropriate way. Where certificates are prepared by computer, the signature may be replaced by the name and job title of the person responsible for validating the document.
